

Q-value measurement of the $0\nu 2\beta$ -decay candidate ^{48}Ca

The CaTi beam time

A.A. Kwiatkowski
Science Forum
6 June 2012

What is the nature of the neutrino?

“I have done a terrible thing.

I invented a particle that cannot be detected.”

– W. Pauli

Two most outstanding questions in neutrino physics:

1. What is the nature of the neutrino?
2. What is its absolute mass scale?

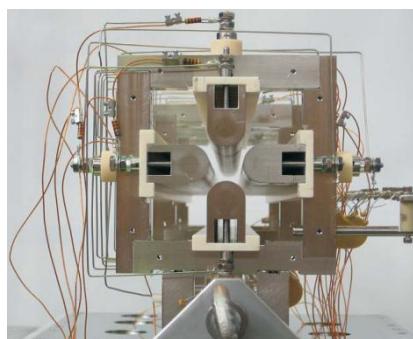

$0\nu2\beta$ -decay experiments

- Forbidden in Standard Model
- Only viable experiment to determine if the neutrino is a Majorana particle

TRIUMF's Ion Trap for Atomic and Nuclear science

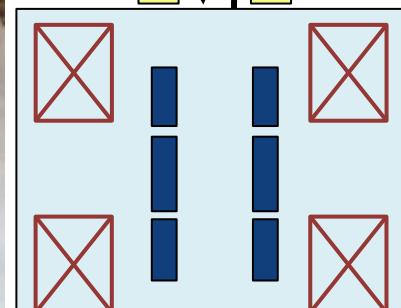

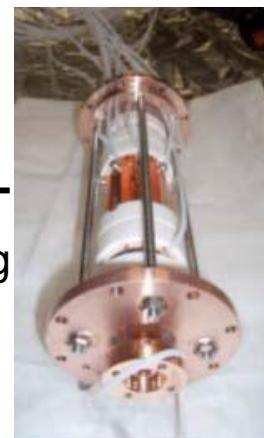

**Surface
Ion Source**
 $^{48}\text{Ca}^+$

RFQ Trap
Accumulate, cool, & bunch beam

 **OLIS Beam**
 $^{48}\text{Ti}^+$

EBIT
ms charge breeding

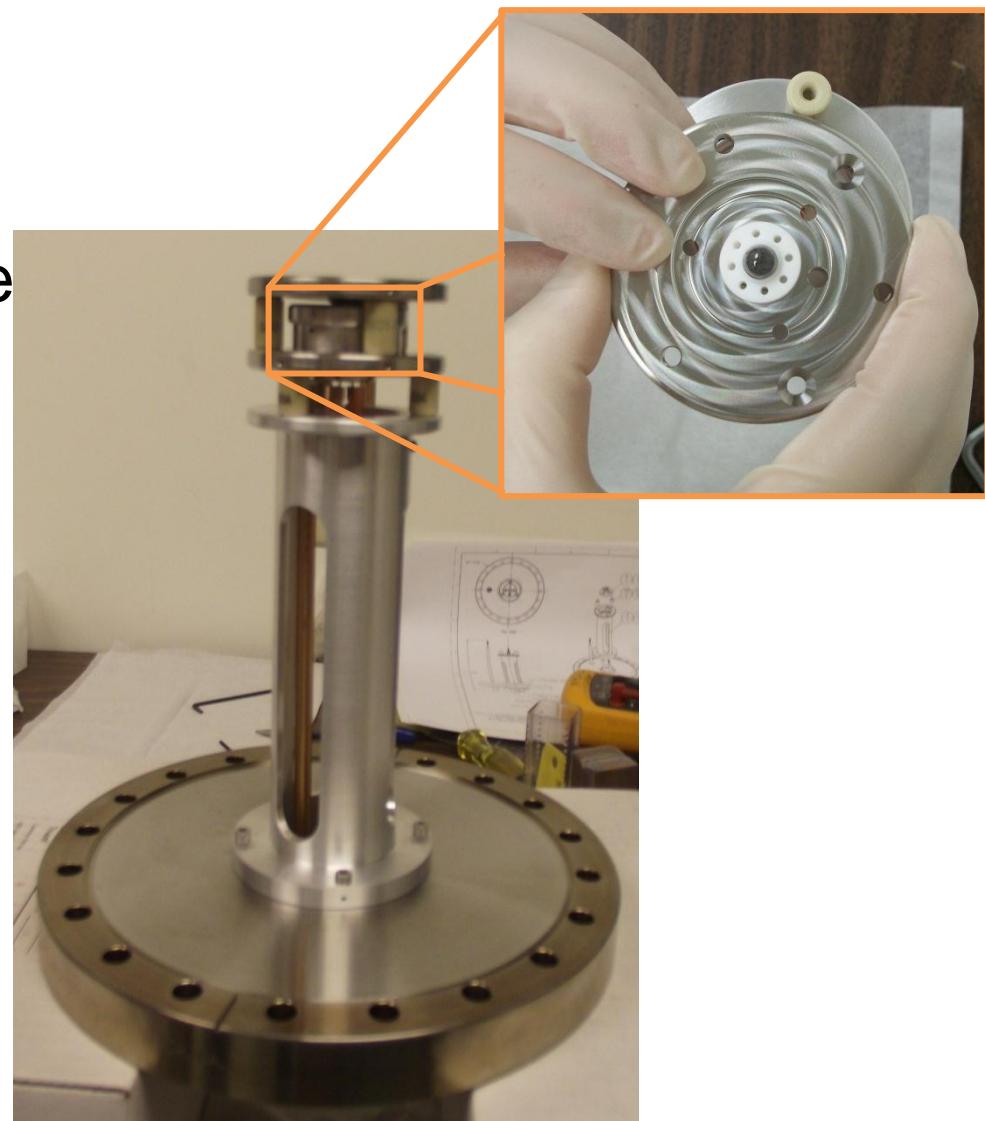

Measurement Penning Trap
High precision mass measurements

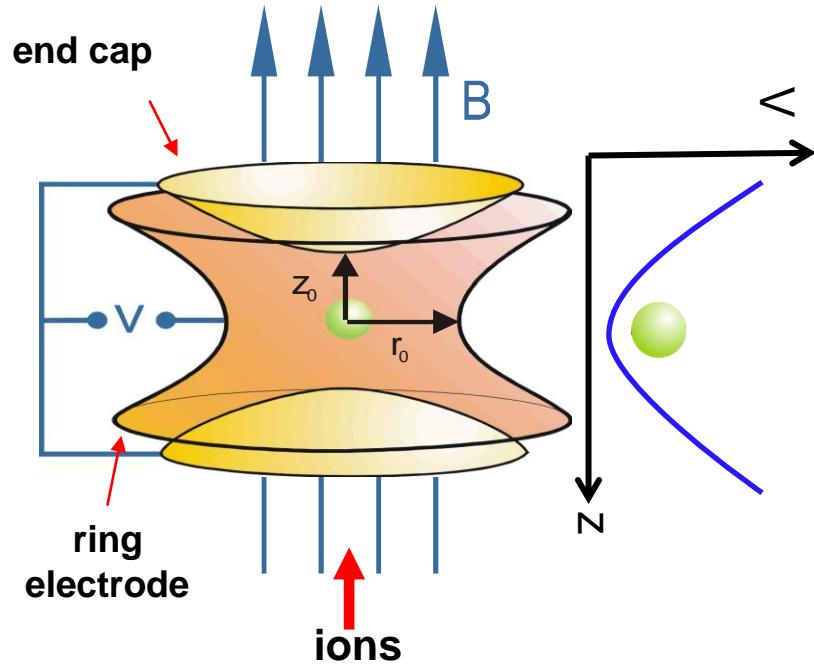

$^{48}\text{Ca}^+$ Source

- 51.7% enriched ^{48}Ca material from Isoflex
- Surface ionization source manufactured by Heatwave
 - Extra precautions to prevent alkali contamination
- Higher temperatures to ionize Ca → new TITAN ion source holder
- OLIS supplied $^{48}\text{Ti}^+$

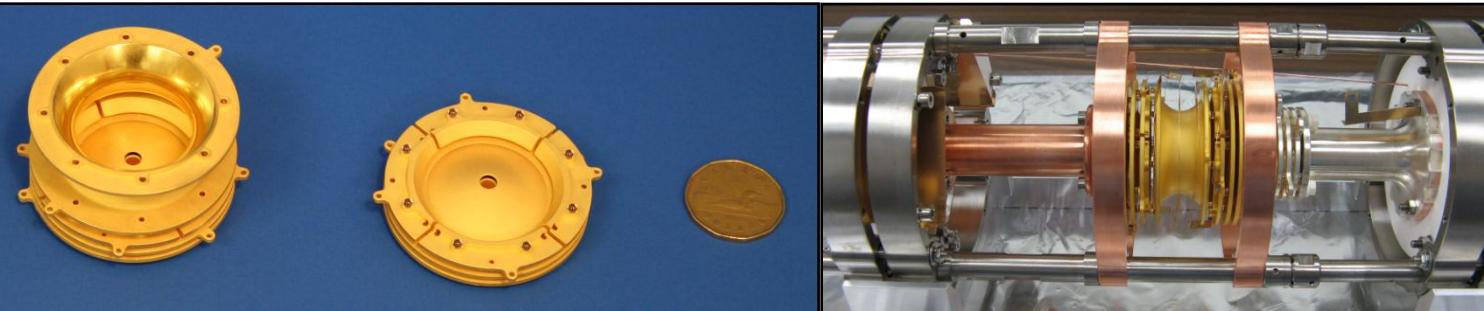

Penning trap mass spectrometry

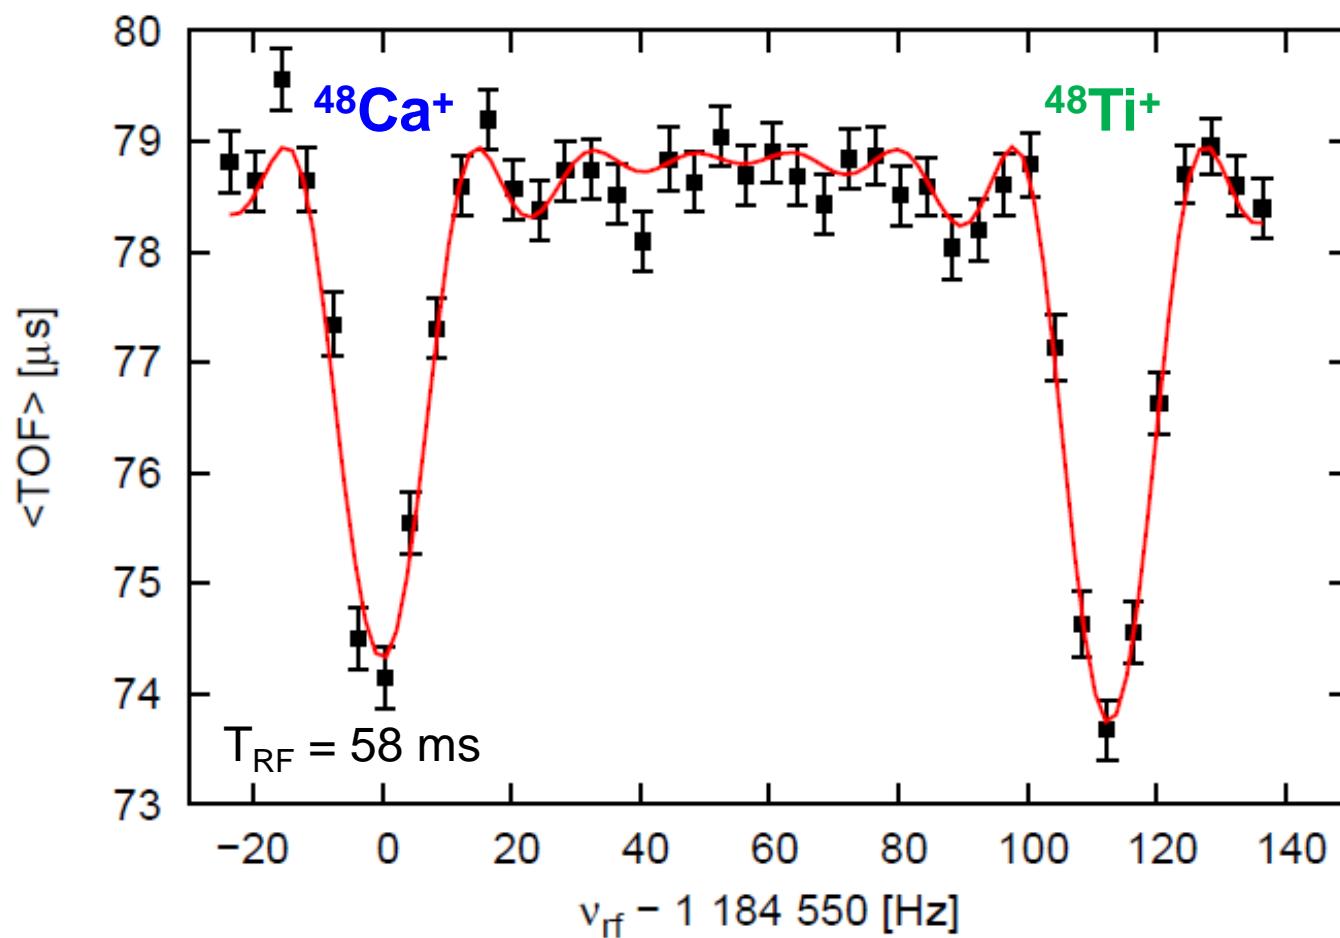

Mass determination via
cyclotron frequency

$$2\pi\nu_c = (q/m) \cdot B$$

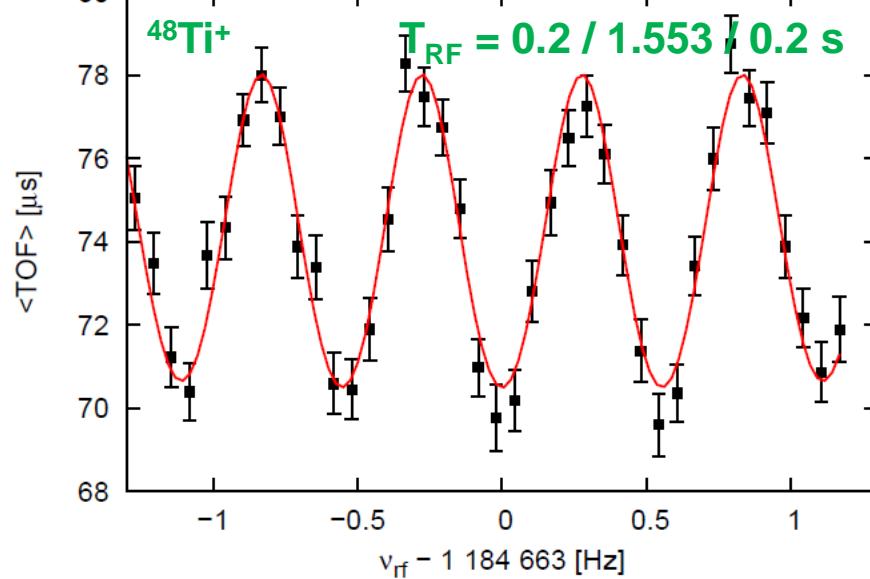

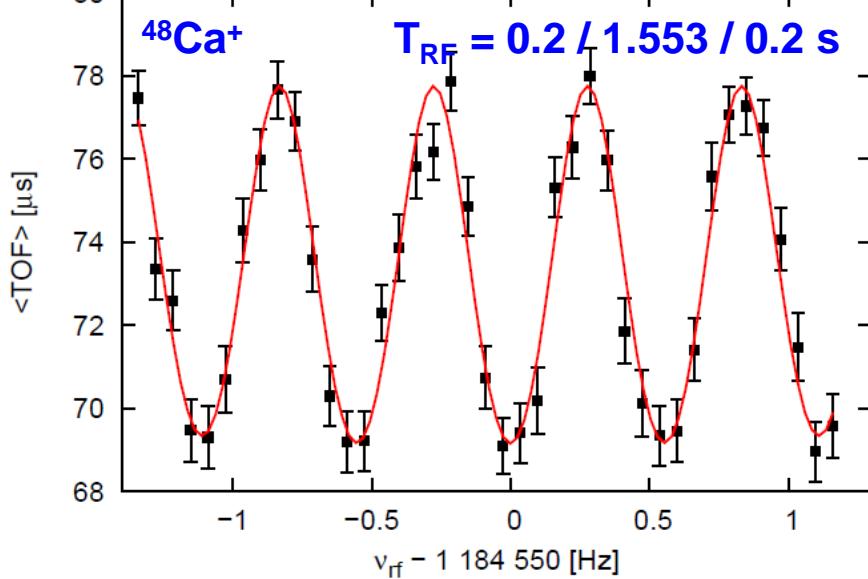

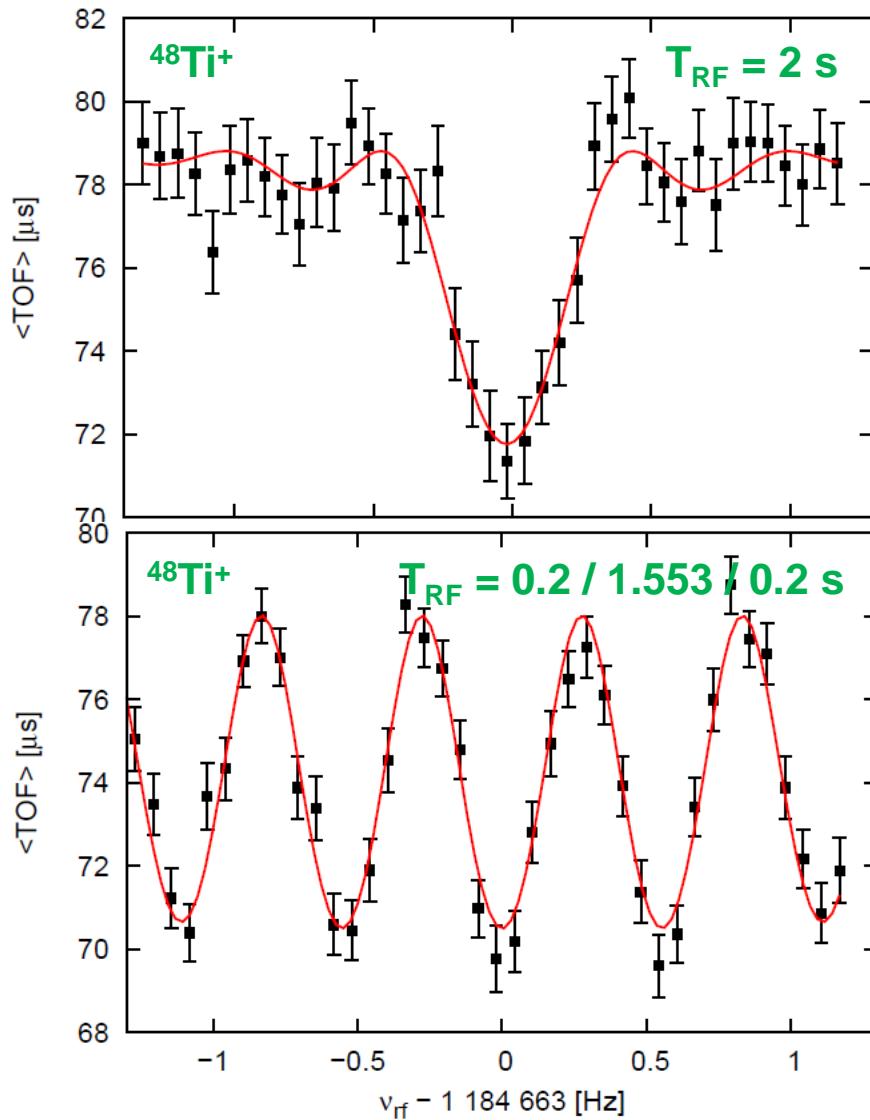

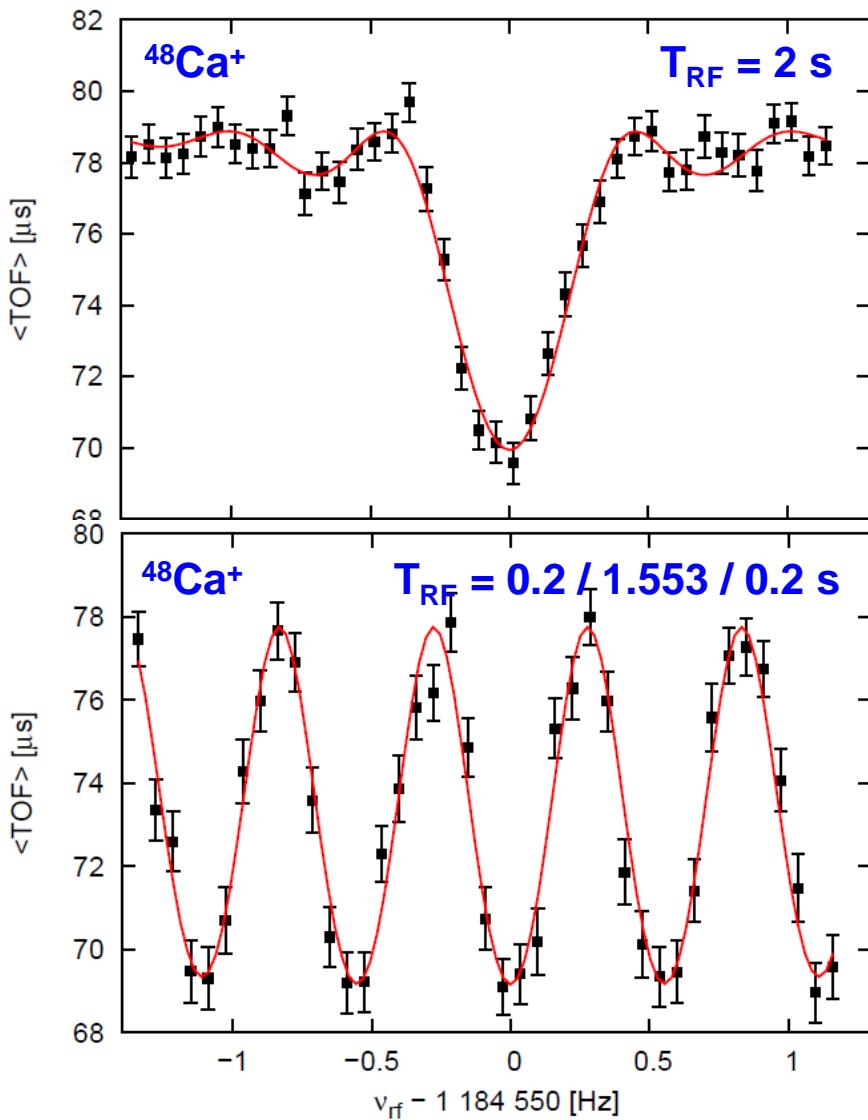

$$Q = \left(\frac{\nu_{c,Ti}}{\nu_{c,Ca}} - 1 \right) (m_{Ti} - m_e)$$

Measurements

Measurements (cont.)

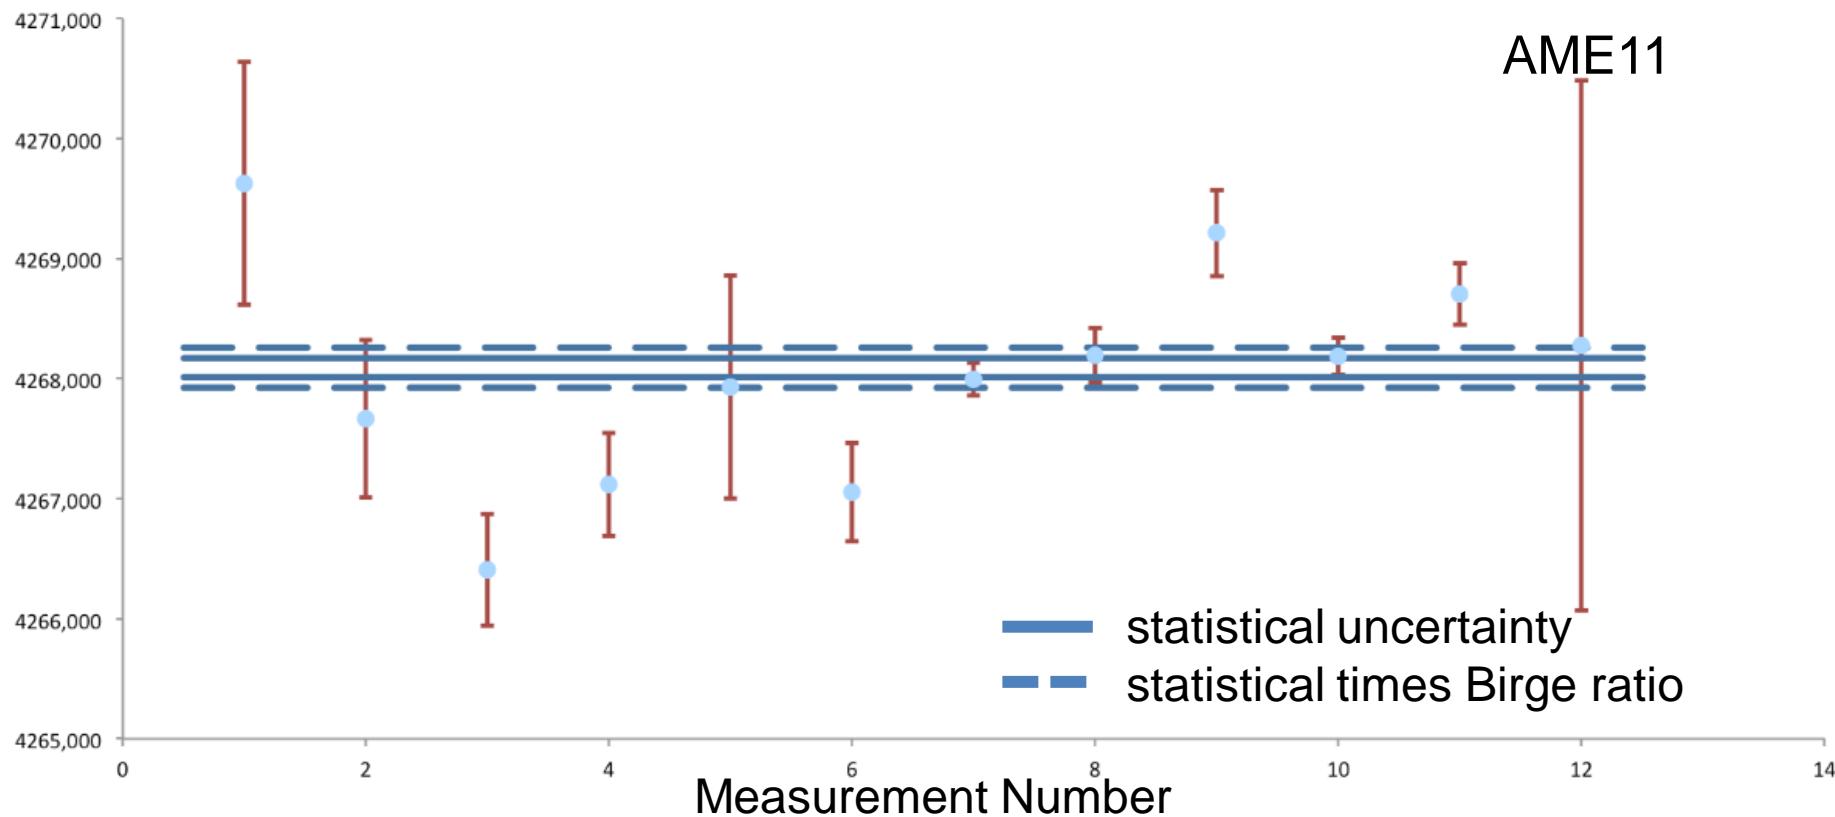

Preliminary Result

TITAN: $4267.96(17)_{\text{stat*Birge}}$ keV

AME11: $4268.3(2.2)$

Q-value [keV]

Thank you!

Merci
