**RE: Call for Beam Requests for Schedule 130
Spring & Summer 2016 – April 20th to September 7th, 2016**

We hereby invite beam requests for Schedule 130, which will start on April 20th, 2016 and run through September 7th, 2016.

ISAC program (Nuclear Physics and betaNMR):

We are considering scheduling targets and ion sources for both production and development. All standard target ion source combinations are available, though target module limitations will prevent scheduling any beams requiring a bias above 54 kV. The target choices and sequence are not yet fixed and will depend on forthcoming beam requests. For questions regarding specific requirements please contact me.

Centre for Molecular and Materials Science program (muons):

We are only considering requests for experiments using surface muons on the M15 and M20 beam lines. The schedule for muSR experiments will be prepared by Iain McKenzie.

The deadline for requesting beam time during Schedule 130 is February 2nd, 2016 at 23:59 PST.

We plan to release a draft schedule on February 24th, 2016 and hold the final scheduling meeting for all stakeholders on March 2nd, 2016.

Please submit your beam requests for Schedule 130 using the online beam request application directly at <https://mis.triumf.ca/science/beam/request/home.jsf> or through the Experimenters' Dashboard at <https://mis.triumf.ca/science/dashboard.jsf>. Should you have any questions or concerns, please do not hesitate to contact me.

Sincerely,

Barry Davids
Beam Scheduler
